"The Effect of Repeated Small Doses of Radioactive Beta-Radiation on the Survival of Skin Homo-grafts."

Prague, Casopis Lekaru Ceskych, Vol 102, No 46, 1963, pp 1272 - 1273

Abstract:(Authors' English summary) Survival of skin homo- and autografts on rabbits ears after local effect of small doses of radioactive beta radiation was studied. Doses were 60 rep, 120 rep and 180 rep respectively within 6 days. It was found that the period of survival of homografts became shorter with the increasing dosis of radiation, while the autografts showed no macroscopic changes. 1 Table, 5 Western, 2 Czech references.

ABSTRACT: A description is given of the technical characteristics of temperature controlling valves and pressure relays produced by the plant in 1964-65, some of which are still in testing. These include thermoregulating valves designed for low temperature refrigeration units operating on freon-13, designed to pass 1,000 kcal/hr; valves designed for freon-12 apparatus with evaporators with great hydraulic resistance, productivity 4000 kcal/hr; valves designed for freon-22 apparatus, with boiling point of -80 to -50°C, productivity 1000 kcal/hr; valves for freon-22 apparatus operating at -50 to -10°C, productivity 1600 kcal/hr; freon-22 valves for large refrigeration units, productivities from 20,000 to 200,000 kcal/hr; ammonia thermoregulation valves, with productivity of 40,000 kcal/hr; and pressure relays, both low-pressure and high-pressure operating, designed for use where there is no explosion danger and where the atmosphere is non-corrosive. TITLE: Effect of electrolyte solution on phase transitions in intermetallic compounds

SOURCE: Elektrokhimiya, v. 2, no. 2, 1966, 254-258

TOPIC TAGS: intermetallic compound, electrolyte, phase transition, magnesium alloy, x-ray analysis

ABSTRACT: Various alloys are treated in a 0.1 N HCl solution for periods ranging from 10 minutes to 6 hours to study the effect of electrolyte solutions on phase transitions of intermetallic compounds. Chemical analysis was used for studying the soluble products of the interaction, while x-ray techniques were used for analyzing the insoluble products. An RKD camera was used with copper emission ($\lambda_{K\alpha} = 1.537 \text{ \AA}$). Exposure time was 5-6 hours. The following compounds were studied: MgZn , MgZn_2 , Mg_2Cu , MgCu_2 , Mg_2Sn , Mg_3Sb_2 , In_2Bi and InBi . It was found that the intermetallic compounds MgZn and MgZn_2 dissolve uniformly, i. e. both components pass into solution in the same ratio in which they are present in the alloy. The dissolution of Mg_2Cu and MgCu_2 is selective--only the magnesium passes into solution, and the surface of the specimen is covered with a film which consists of metallic copper in the case of MgCu_2 , and of a combin-

UDC: 541.13

Cord 1/2

L 34826-66

ACC NR: AP6017607

ation of metallic copper and $MgCu_2$ in case of Mg_2Cu . The formation of intermediate intermetallic compounds which are rich in the noble component may also be observed during dissolution of In_2Bi . Phase transitions with the formation of the noble component take place when Mg_2Sn and Mg_3Sb_2 are treated in hydrochloric acid, with the antimony passing into solution in quantities of 8-10% while the tin concentration in solution is only slightly less than its content in the alloy. The experimental data indicate that the formation of the new phase may be due to rearrangement of a surface layer with a defective crystal lattice, or to electrochemical reduction of the noble ions. Orig. art. has: 2 tables.

AUTHOR: Vavřín Jiří, Engineer

TITLE: Simple solution of control circuits with one to four delay elements

PERIODICAL: Elektrotechnický obzor, v.52, no.4, 1963, 191-196

TEXT: To avoid the solution of high-order linear differential equations, while retaining the generality of analytical methods as compared to graphical, the author proposes to apply the root-locus method of analysis analytically. The order of the equation whose roots are to be found is reduced by a factor of two. Thus a system containing up to four delay elements is solved by two quadratic equations. An example is given of a system of fourth degree with derivative and integration elements and multiple feedbacks (Fig.13). The article concludes with some brief remarks on approximations which can be made, to permit still higher-order systems to be handled directly by the equations derived here. There are 15 figures.

TITLE: Reversible automatic and manual control switching circuit. CZ Pat.
No. PV 3742-64, Class 21

TOPIC TAGS: automatic control design, switching circuit, magnetic amplifier

ABSTRACT: An electronic network for shifting from automatic control to manual and vice versa has been introduced. It incorporates a magnetic d-c output amplifier applied to the manual control system, a balancing circuit with a three-way switch, a preamplifier that feeds the output magnetic amplifier, and a controllable d-c power source with output diodes or a high resistance. The network operates under three possible settings: 1) the d-c output of the output magnetic amplifier is connected to the controlled system, for instance to the excitation winding of a synchronous alternator; 2) the output magnetic amplifier is parallel-coupled with the controllable d-c power source and both elements are linked to the controlled

Card 1/2

✓ Alkyl ammonium selenites, Zdislav Vavrin (Masaryk
Univ., Brno, Czech.). *Publ. int. Univ. Masaryk*
358, 291-7(1954)(German summary).— RNH_4SeO_3 , where
R = Me, Et, Pr, iso-Pr, Bu, iso-Bu, Am, iso-Am,
n-hexyl, n-heptyl, and capryl, were prepd. by the reaction
of a soln. of dry SeO_2 in the appropriate anhyd. alc. with dry
 NH_4 , in the rigorous absence of atm. moisture, in the app.
described. The white compds. were pptd. with anhydrous
 Et_2O , excess Et_2O was evapd., and the compds. were
analyzed for NH_4 by distn. from NaOH soln. into 0.1N
 H_2SO_4 and titration, and for Se (gravimetrically by reduc-
tion with $N_2H_4 \cdot H_2SO_4$ or $NH_4OH \cdot HCl$). The compds. hy-
drolyze easily even with atm. H_2O , and decomp. at temps.
slightly higher than room temps. The deriva. of the lower
alcs. are somewhat sol. in excess alc., unlike those of higher
alcs. H. Newcombr

TITLE: Research on a very economical arrangement of lightning arresters for protection against interphase and ground surges

SOURCE: Elektrotechnicky casopis, no. 9, 1964, 538-549

TOPIC TAGS: electric protective equipment, lightning

Abstract: Czechoslovak, Russian and English summaries. Modified: Special arrangement of lightning arresters, which are intended for protection against interphase surge as well as ground surge, are briefly analyzed on the basis of characteristic vector diagrams and are then compared with a very economical Czechoslovak arrangement consisting of six normal lightning arresters, three of which are intended for interphase protection. With this arrangement the residual voltage is increased by 15.5 percent; and the a-c ignition voltage, by 73 percent. In some specific cases, these drawbacks can be reduced significantly. Tests in the research program on protection for a-c networks are described and the attainable protection levels are given. Orig. art. has 8 figures, 5 formulas, 3 graphs and 1 table.

AUTHOR: Vavřínková, Zdenka, Engineer
TITLE: Ground ozone measurements by Ehmert's method
SOURCE: Letňany, Výzkumny a Zkušební Letecký Ústav. Zpravodaj VZLÚ,
no. 4, 1962, 35-37

TEXT: The article describes a new method of ground ozone determination. It is based on the reaction $O_3 + 2 KI + H_2O = I_2 + 2 KOH + O_2$. The liberated iodine is titrated by $Na_2S_2O_3$ according to the well known methods. The present improvement is based on the fact of introducing the hyposulphite into the mixture at the beginning and back-titrating it after the measurement. The difference found corresponds to the reacted ozone. This value is found by an instrument called Iodometer. It measures the depolarised current between two platinum electrodes which flows through the system $I_2 - KI$ when all hyposulphite has been used up. The most important advantage of the method lies in the short time required to obtain a very accurate measurement of the ozone present. The method is suited both for needs of aeronautics and for application of rubber products. Photographs of the Iodometer are shown. 3 Czech and 5 other references.

Title : Problems in the Manufacture of "Penococoncrete" for
Ordnance

Orig Pub : Pozami stavby, 1958, 6, No 6, 307-311

Abstract : Optimum strength of articles made of "penococoncrete" is
attained when 30 - 40% of cement is replaced by fine
cinder dust collected from power station stacks. Com-
pacting properties and hygroscopicity of articles are
reduced when "HidroF PV" additives are employed. --
